Nicolas.Rudaz@epfl.ch

Note: these color plates will look best on a color monitor, but they can also be output to a dye-sublimation printer or even a color laser printer. Try to zoom into the figures to have a better look at the details.

Fig. 1. Patches 1) and 2): two cL slices rendered with three generalized color differences.
Fig. 2. Patches 3), 4), 5) and 6): four color wedges rendered with three generalized color differences.
